

Maglev E Vehicle Kit 10 Pack

User Guide

PITSCO
EDUCATION

The Maglev E Vehicle Kit Class Pack is bulk packed to save you money. As such, you need to divide the class pack into 10 individual kits. To do this, follow the instructions below. If anything is missing from your class pack, please contact Customer Service at 800-358-4983.

1. Take all items from the box, and remove any that are in plastic bags. You should have:
 - 20 white corrugated plastic rectangles
 - Foam tape strip(s)
 - 40 ceramic magnets
 - 10 propellers
 - 10 motors with presoldered leads
 - Maglev E Vehicle Kit User Guide
2. Sort two pieces of corrugated plastic rectangles into 10 separate piles.
3. Place four ceramic magnets into each pile.
4. Add one propeller into each pile.
5. Place one motor into each pile.
6. Using scissors, cut the foam tape strip into 10 pieces – each piece should have four precut foam tabs on it.
7. You can photocopy the kit user guide if you want one for every student. If so, add one to each pile. Otherwise, use the included user guide to help lead the activity in the class, passing it around to students if needed.
8. Place each pile in a bag, box, or another container to keep the parts together until they are used in class.
9. Distribute kits to students at the appropriate time and follow all the instructions – including safety instructions – in the Maglev E Vehicle Kit User Guide.
